

Modification of Section 191 of the Nemeth Code

A minor wording change to Section 191 of the Nemeth Code was recommended by the BANA Mathematics Technical Committee. This recommendation was approved by the BANA Board at its November 2012 meeting. By removing the word "outlines" from this section of the Nemeth Code, transcribers can use the nested list format detailed in *Braille Formats: Principles of Print-to-Braille Transcription, 2011* when transcribing outlines and tables of contents in Nemeth. This change is effective immediately.

With the 2012 modification, the opening of **§ 191** now reads:

§ 191. Margins for Non-Spatial Itemized Materials: When material is identified sequentially by number or letter, as in exercises, it will be referred to as *itemized material*.
